

# MISHIN COIL (MISHIN GENERATOR)

## MANUAL

The complete set (capacitive coil`s) includes:

The complete set of Mishin Coil (Mishin generator)

- Sine autogenerator.
- High quality power supply 5V 2000mA, with output filtering, cable (length is 100cm).
- Toroidal capacitive coil with a diameter of 6.5cm. TMA (Tor Mishina Alexandra) is a round coil shaped like a tor. It is smaller than the radius of the zone of influence, but greater than the density of the impact, in contrast to the flat coil, which has a smaller impact density and greater radius of influence. It has a stronger field than DMA, so you should not use it for a long time during one session. The best option is to use DMA then TMA, then again DMA and then TMA and so on. The coil operates at 300 kHz

- Disk capacitive coil of wires in varnish 0.5mm. DMA (Mishin Alexander Disk) is a wooden round disc (flat coil). The disc on both sides are covered with plywood 4mm, which when touched to the body does not change and does not distort the frequency of the coil. The length of the cable from the coil to the generator is 2 m. The coil operates at 300 kHz

– Static field indicator.

### Getting the Device Ready for the Treatment Session

- 1) Connect the coil (a wooden round disk) into the sine autogenerator. You should plug the coil into a red socket (on the picture it is named “ВЫХОД СИГНАЛА”).

Picture 1. the sine autogenerator

- 2) Connect the device power supply with the sine autogenerator using the socket for power connection shown on the Picture 2

Picture 2

- 3) Plug the device into a 220 volt outlet. When you do that two LED indicators will appear on the panel of the device: the red LED indicates the presence of power, the green LED lights up when the coil is connected and indicates that the device is ready for being used.

### Treatment Sessions:

- 1) Remove all metal products (chains, rings, etc.) and put all metal products away. (especially closed jewelry such as chains, bracelets, etc. If a necklace is worn on the neck, the coil action will not reach the head.
- 2) Before the session, drink one glass of water.
- 3) Put a coil on the organ you are treating (e.g. like in a video attached). You can apply the coils by any side. To increase the effectiveness of a torus or disk on the top of the coil, you can put your hand. All diseases have a closed ring structure. The difference is only in size. Very coarse coils will work with very small viruses, so we use a torus. There should be at least two coils. This is a flat disk (medium or large) and a torus. With the full coincidence of the phases (voltage and current) of the signal supplied by the generator to the coil, we physically get a standing wave, when the phases shift, it starts to rotate like a "fan". Up to 90 degrees of phase shift implosion processes occur in the coils, which benefit us. It also occurs with an increase in the frequency, higher than the operating frequency of the coil (the processes in the ES harmonics are implosion), and when the frequency of the harmonics decreases, they emit radiation, and the radiation around us is already full. At 90 degrees, the rotation speed will be maximum and the flow merges into a ring.
- 4) Time of the session depends on the disease you are treating. Overdoing in treatment is not necessary. Sessions should last up to 15-60 minutes a day or every other day (according to the sensations). To help the kidneys remove toxins (and they are usually clogged in all) we act on each kidney a torus every day for 10 minutes. Up to 60-90 minutes of the coil (torus or disk) operation per day is sufficient for the sore removal process. The main thing is not to "overdose", so that the body has time to regenerate and remove toxins.

**The speed of recovery depends on several factors:**

1. Resources of the body: how much illnesses have worn out the life support system.
2. Locations of a patient. We live in an environment with constant pulsation from electrical devices: mobile phones, tablets, computers, cell towers. These pulsations are the cause of many diseases. Therefore, the process of recovery is better to start outside the city, where the sources of such pulsations are less.

**Note!** Here is a table of the diseases and time, it is not complete, so if your disease is not listed here, please, contact us and we will provide you with more information. The time given in the table is not advisable but not strict, which means you can use it a bit longer like not 15 but 20 min or so.

**List of Diseases and Recommended Treatment Sessions**

**COLD AND FLU**

Flat coil – 20 minutes on the chest and 20 minutes on the kidneys. Do it for 2-3 days in the morning and in the evening.

Advice: Drink acidified teas.

Back pain comes from the kidneys. Flat coil – 20-30 minutes on the lower back or Thor – 10 min on each kidney.

Do it 1-2 times a day it in a day. The color and smell of urine indicates the number of toxins in the blood.

Take breaks for a week with enough darkening.
